

## **Wastewater Design – Granular Activated Carbon Systems**

**Course Number:** CH-02-905

**PDH:** 12

**Approved for:** AK, AL, AR, FL, GA, IA, IL, IN, KS, KY, LA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, SC, SD, TN, TX, UT, VA, VT, WI, WV, and WY

### **State Board Approvals**

Florida Provider # 0009553 License #868

Indiana Continuing Education Provider #CE21800088

Maryland Approved Provider of Continuing Professional Competency

New Jersey Professional Competency Approval #24GP00025600

North Carolina Approved Sponsor #S-0695

NYSED Sponsor #274

**Course Author:** Mathew Holstrom

### **How Our Written Courses Work**

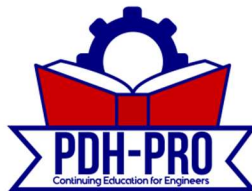

This document is the course text. You may review this material at your leisure before or after you purchase the course.

After the course has been purchased, review the technical material and then complete the quiz at your convenience.

A Certificate of Completion is available once you pass the exam (70% or greater).

If a passing grade is not obtained, you may take the quiz as many times as necessary until a passing grade is obtained).

If you have any questions or technical difficulties, please call (508) 298-4787 or email us at [admin@PDH Pro.com](mailto:admin@PDH Pro.com).

|                                                                                            |    |
|--------------------------------------------------------------------------------------------|----|
| Introduction .....                                                                         | 1  |
| 1.1 Basic concepts and definitions .....                                                   | 1  |
| 1.1.1 Adsorption as a surface process .....                                                | 1  |
| 1.1.2 Some general thermodynamic considerations .....                                      | 2  |
| 1.1.3 Adsorption versus absorption .....                                                   | 3  |
| 1.1.4 Description of adsorption processes: The structure of the<br>adsorption theory ..... | 3  |
| 1.2 Engineered adsorption processes in water treatment .....                               | 5  |
| 1.2.1 Overview .....                                                                       | 5  |
| 1.2.2 Drinking water treatment .....                                                       | 6  |
| 1.2.3 Wastewater treatment .....                                                           | 6  |
| 1.2.4 Hybrid processes in water treatment .....                                            | 7  |
| 1.3 Natural sorption processes in water treatment .....                                    | 8  |
| <br>2 Adsorbents and adsorbent characterization.....                                       | 11 |
| 2.1 Introduction and adsorbent classification .....                                        | 11 |
| 2.2 Engineered adsorbents .....                                                            | 12 |
| 2.2.1 Activated carbon .....                                                               | 12 |
| 2.2.2 Polymeric adsorbents .....                                                           | 15 |
| 2.2.3 Oxidic adsorbents .....                                                              | 16 |
| 2.2.4 Synthetic zeolites .....                                                             | 17 |
| 2.3 Natural and low-cost adsorbents .....                                                  | 18 |
| 2.4 Geosorbents in environmental compartments .....                                        | 19 |
| 2.5 Adsorbent characterization .....                                                       | 20 |
| 2.5.1 Densities .....                                                                      | 20 |
| 2.5.2 Porosities .....                                                                     | 22 |
| 2.5.3 External surface area .....                                                          | 23 |
| 2.5.4 Internal surface area .....                                                          | 25 |
| 2.5.5 Pore-size distribution .....                                                         | 28 |
| 2.5.6 Surface chemistry .....                                                              | 34 |
| <br>3 Adsorption equilibrium I: General aspects and single-solute adsorption.....          | 41 |
| 3.1 Introduction .....                                                                     | 41 |
| 3.2 Experimental determination of equilibrium data .....                                   | 42 |
| 3.2.1 Basics .....                                                                         | 42 |

## VI | Contents

|       |                                                                                          |     |
|-------|------------------------------------------------------------------------------------------|-----|
| 3.2.2 | Practical aspects of isotherm determination . . . . .                                    | 45  |
| 3.3   | Isotherm equations for single-solute adsorption . . . . .                                | 47  |
| 3.3.1 | Classification of single-solute isotherm equations . . . . .                             | 47  |
| 3.3.2 | Irreversible isotherm and one-parameter isotherm . . . . .                               | 48  |
| 3.3.3 | Two-parameter isotherms . . . . .                                                        | 49  |
| 3.3.4 | Three-parameter isotherms . . . . .                                                      | 55  |
| 3.3.5 | Isotherm equations with more than three parameters . . . . .                             | 58  |
| 3.4   | Prediction of isotherms . . . . .                                                        | 59  |
| 3.5   | Temperature dependence of adsorption . . . . .                                           | 64  |
| 3.6   | Slurry adsorber design . . . . .                                                         | 67  |
| 3.6.1 | General aspects . . . . .                                                                | 67  |
| 3.6.2 | Single-stage adsorption . . . . .                                                        | 69  |
| 3.6.3 | Two-stage adsorption . . . . .                                                           | 72  |
| 3.7   | Application of isotherm data in kinetic or breakthrough<br>curve models . . . . .        | 74  |
| 4     | Adsorption equilibrium II: Multisolute adsorption . . . . .                              | 77  |
| 4.1   | Introduction . . . . .                                                                   | 77  |
| 4.2   | Experimental determination of equilibrium data . . . . .                                 | 78  |
| 4.3   | Overview of existing multisolute adsorption models . . . . .                             | 80  |
| 4.4   | Multisolute isotherm equations . . . . .                                                 | 81  |
| 4.5   | The ideal adsorbed solution theory (IAST) . . . . .                                      | 84  |
| 4.5.1 | Basics of the IAST . . . . .                                                             | 84  |
| 4.5.2 | Solution to the IAST for given equilibrium concentrations . . . . .                      | 88  |
| 4.5.3 | Solution to the IAST for given initial concentrations . . . . .                          | 90  |
| 4.6   | The pH dependence of adsorption: A special case of<br>competitive adsorption . . . . .   | 94  |
| 4.7   | Adsorption of natural organic matter (NOM) . . . . .                                     | 98  |
| 4.7.1 | The significance of NOM in activated carbon adsorption . . . . .                         | 98  |
| 4.7.2 | Modeling of NOM adsorption: The fictive component approach<br>(adsorption analysis)..... | 100 |
| 4.7.3 | Competitive adsorption of micropollutants and NOM.....                                   | 104 |
| 4.8   | Slurry adsorber design for multisolute adsorption.....                                   | 111 |
| 4.8.1 | Basics .....                                                                             | 111 |
| 4.8.2 | NOM adsorption .....                                                                     | 112 |
| 4.8.3 | Competitive adsorption of micropollutants and NOM.....                                   | 113 |
| 4.8.4 | Nonequilibrium adsorption in slurry reactors.....                                        | 118 |
| 4.9   | Special applications of the fictive component approach.....                              | 120 |

|       |                                                            |     |
|-------|------------------------------------------------------------|-----|
| 5     | Adsorption kinetics.....                                   | 123 |
| 5.1   | Introduction .....                                         | 123 |
| 5.2   | Mass transfer mechanisms.....                              | 123 |
| 5.3   | Experimental determination of kinetic curves.....          | 124 |
| 5.4   | Mass transfer models.....                                  | 127 |
| 5.4.1 | General considerations .....                               | 127 |
| 5.4.2 | Film diffusion.....                                        | 129 |
| 5.4.3 | Surface diffusion .....                                    | 136 |
| 5.4.4 | Pore diffusion .....                                       | 143 |
| 5.4.5 | Combined surface and pore diffusion .....                  | 149 |
| 5.4.6 | Simplified intraparticle diffusion model (LDF model) ..... | 153 |
| 5.4.7 | Reaction kinetic models .....                              | 162 |
| 5.4.8 | Adsorption kinetics in multicomponent systems.....         | 164 |
| 5.5   | Practical aspects: Slurry adsorber design.....             | 166 |
| 6     | Adsorption dynamics in fixed-bed adsorbers.....            | 169 |
| 6.1   | Introduction .....                                         | 169 |
| 6.2   | Experimental determination of breakthrough curves .....    | 175 |
| 6.3   | Fixed-bed process parameters .....                         | 176 |
| 6.4   | Material balances .....                                    | 179 |
| 6.4.1 | Types of material balances.....                            | 179 |
| 6.4.2 | Integral material balance .....                            | 179 |
| 6.4.3 | Differential material balance.....                         | 185 |
| 6.5   | Practical aspects .....                                    | 189 |
| 6.5.1 | Introduction .....                                         | 189 |
| 6.5.2 | Typical operating conditions .....                         | 190 |
| 6.5.3 | Fixed-bed versus batch adsorber .....                      | 191 |
| 6.5.4 | Multiple adsorber systems.....                             | 193 |
| 7     | Fixed-bed adsorber design.....                             | 197 |
| 7.1   | Introduction and model classification.....                 | 197 |
| 7.2   | Scale-up methods .....                                     | 198 |
| 7.2.1 | Mass transfer zone (MTZ) model.....                        | 198 |
| 7.2.2 | Length of unused bed (LUB) model.....                      | 202 |
| 7.2.3 | Rapid small-scale column test (RSSCT).....                 | 203 |
| 7.3   | Equilibrium column model (ECM) .....                       | 207 |
| 7.4   | Complete breakthrough curve models.....                    | 211 |
| 7.4.1 | Introduction .....                                         | 211 |
| 7.4.2 | Homogeneous surface diffusion model (HSDM) .....           | 213 |
| 7.4.3 | Constant pattern approach to the HSDM (CPHSDM) .....       | 217 |

|-------|-----------------------------------------------------------------------------------------|------------|
| 7.4.4 | Linear driving force (LDF) model.....                                                   | 220        |
| 7.4.5 | Comparison of HSDM and LDF model.....                                                   | 224        |
| 7.4.6 | Simplified breakthrough curve models with analytical solutions.....                     | 226        |
| 7.5   | Determination of model parameters.....                                                  | 232        |
| 7.5.1 | General considerations.....                                                             | 232        |
| 7.5.2 | Single-solute adsorption.....                                                           | 233        |
| 7.5.3 | Competitive adsorption in defined multisolute systems.....                              | 238        |
| 7.5.4 | Competitive adsorption in complex systems of unknown composition.....                   | 238        |
| 7.6   | Special applications of breakthrough curve models.....                                  | 240        |
| 7.6.1 | Micropollutant adsorption in presence of natural organic matter.....                    | 240        |
| 7.6.2 | Biologically active carbon filters.....                                                 | 248        |
| 8     | Desorption and reactivation.....                                                        | 253        |
| 8.1   | Introduction.....                                                                       | 253        |
| 8.2   | Physicochemical regeneration processes.....                                             | 254        |
| 8.2.1 | Desorption into the gas phase.....                                                      | 254        |
| 8.2.2 | Desorption into the liquid phase.....                                                   | 256        |
| 8.3   | Reactivation.....                                                                       | 261        |
| 9     | <b>Geosorption processes in water treatment.....</b>                                    | <b>265</b> |
| 9.1   | Introduction.....                                                                       | 265        |
| 9.2   | Experimental determination of geosorption data.....                                     | 267        |
| 9.3   | The advection-dispersion equation (ADE) and the retardation concept.....                | 268        |
| 9.4   | Simplified method for determination of $R_d$ from experimental breakthrough curves..... | 271        |
| 9.5   | Breakthrough curve modeling.....                                                        | 273        |
| 9.5.1 | Introduction and model classification.....                                              | 273        |
| 9.5.2 | Local equilibrium model (LEM).....                                                      | 275        |
| 9.5.3 | Linear driving force (LDF) model.....                                                   | 277        |
| 9.5.4 | Extension of the local equilibrium model.....                                           | 279        |
| 9.6   | Combined sorption and biodegradation.....                                               | 280        |
| 9.6.1 | General model approach.....                                                             | 280        |
| 9.6.2 | Special case: Natural organic matter (NOM) sorption and biodegradation.....             | 285        |
| 9.7   | The influence of pH and NOM on geosorption processes.....                               | 287        |
| 9.7.1 | pH-dependent sorption.....                                                              | 287        |
| 9.7.2 | Influence of NOM on micropollutant sorption.....                                        | 289        |
